

ERICA DODDS

CHIEF OPERATING OFFICER
FOUNDATION FOR CLIMATE RESTORATION

Dr. Erica Dodds, eco-anxiety and environmental expert, is a climate advocate working with the Foundation for Climate Restoration, the nonprofit committed to removing the excess carbon from our atmosphere. Erica spends much of her time speaking with youth and millennials about how proactive optimism is the only rational response to the existential threat of climate change. At just 29 years old, Erica has presented at the UN Headquarters and multiple different youth climate convenings across the country.

Erica holds a Ph.D. in Interdisciplinary Evaluation and an M.A. in International Development Administration. Erica's lifelong interest in poverty reduction led her to study abroad in West Africa, intern with an NGO in rural India, and work for the Evaluation Office of the International Labour Organization in Geneva. As the Chief Operating Officer of the Foundation for Climate Restoration, Erica is committed to actively engaging and empowering youth in climate activism. She believes that restoring our climate to safe and proven levels of CO₂ will safeguard our planet for future generations. She believes that the key is setting a goal of restoring a proven safe climate.
